# To wire or not to wire

## NX-10 Security system

GE imagination at work

## Now your security goes where you go

Unlike anything in today's market, our NX-10 system is completely wireless with a new keypad in a designer housing. The NX-10 series goes where no security system has gone before.

Now you can hold in the palm of your hand a totally mobile, full-featured security system. One that protects your family, your property, yourself. Every minute of every day.

Usually keypads are immobile. Once installed on your wall, they stay there. Now you no longer have to go to it, it goes with you. Control becomes more complete.

For its frequency, the NX-10 employs 868Mhz technology that enables two-way independent transmission. One way is for the sensors, the other one for the keypad and sirens. This way, they will never be in conflict. A true conflict-free safe zone!

You can be assured that everything is safe and sound with the control in the palm of your hand.

## You decide where and when

With either the wired or wireless versions, you decide which area needs security, and in which areas you want to roam freely. Wherever you are in your home or business, you divide your property into the zones you decide, protecting upstairs or the garage whilst you are in another part of the house.

Want strangers to think you are home when you are elsewhere? Our easy-to-programme system automatically turns the lights on and off around your home at set intervals. Want to water the lawn or open and close the shutters? Use your keyfob! It also can activate exterior lighting or open your garage door when you come driving up. Our home automation range even allows you to take control over most of your electrical equipment with a simple phone call.

Turn up the heating before you get home and arrive to a warm, homey atmosphere. They talk to each other, the NX-10 home automation modules, via your home electrical system. And so simple to use.

## Designer housing

- for that safe and sound feeling

Using high-tech to keep you highly safe, the NX-10 offers a full range of wireless 868MHz Gen2 components. That's right, no wires, just an iPod inspired slim, compact keypad with two rows of up to 16 large characters, and one row of easy to read icons on a LCD. You have menu or location programming in a bright icon information display due to our special backlight. And its independent backlight battery set takes six "AA" batteries with a lifetime of three years. That's a long worry-free period to live in safety.

- built for looks as well as security

Unlike anything currently available in the market, our newly re-designed keypad housing discreetly blends-in with your home décor. While covering the feature-rich menu driven keypad, the stylish housing with its icon information display will please your eye while robustly protecting your property. Looks good as it keeps an eye out.

## Security in the hand

The wireless keypad is portable and clicks snugly into the bracket. It works with batteries that will keep it continually on for three years. The keypad will never flip or go off or into sleep mode. No more drilling holes in your walls. It's in your hand. And the NX-10 offers replaceable keycaps for emergency, police or medical buttons.

## As you like it

### Remote connectivity

Possessing a mobile phone gives the user another level of instantaneous monitoring power. Now you can receive SMS (text) messages from your system informing you of what kind of event has occurred. Via SMS you can also control the security system, of course using only registered mobile phone numbers.

The TCP/IP module can connect your security system to the Internet, enabling you to use your computer or mobile phone remotely to control the panel. With our PremisesConnect application, you can:

- remotely check or change your panel status,
- if you use IP cameras, see whether everything on your property is fine, and
- if you want you may even switch on/off lights. No matter where in the world you are!

## Sensitive sensors

### Motion sensors

No compromise. Our NX-10 generation motion sensors never concede the slightest advantage when it comes to your protection. The many security awards attest to our unswerving dedication. Incorporating state-of-the-art technology, NX-10 analyses all forms so the signal intelligently distinguishes an actual person from a false alarm. Several programmable security levels determine how much information is passed to the host system. Every sensor delivers what our competitors can only dream of. NX-10 makes sure you have safe dreams.

### Smoke detectors

Our smoke detectors are designed to work each and every time, without fail. Guaranteed. Always checking, the automatic diagnostic system lets you know when it's time for a maintenance inspection. And the balance of optical to thermal sensors means they react faster for the greatest security.

### Door/window sensors

While keeping you safe, we want to keep your environment attractive. So the NX-10 door/window sensors blend seamlessly, inside and out.

We give choice. We design sensors for any type of door or window. The model you want is what we make, suiting your needs best.

### Voice module

Specially designed to report every type of alarm to the officials who need to know, the effortless NX-10 series voice module let you record up to 16 different messages. These can be sent to one of six pre-programmed phone numbers in the event of alarm.

### Control panels

Control panels are the hub of your system. They are specially designed by security professionals with the protection of you and yours in mind. Ready to react in every situation, protected against sabotage, they warn you as soon as anyone cuts your power or phone line, or attempts to break in to your property.

NX-10 offers versions in small or large polycarbonate housing, with or without GSM/GPRS modules on-board. And it delivers up to 48 wireless zones straight out-of-the-box. Ready to serve and protect!

### Keypads

The newly designed keypad for the NX-10 series blends into your home rather than sticks out on your wall. Its interface provides graceful access to every function of your home alarm system. Every member of the family will find it easy to operate. It knows how to keep a log of all activities or events carried out when you're absent. So you'll always know the exact date and time your system was activated or deactivated and who was responsible. This 100% safety certainty product is available in a range of colours, there's always one to match your interior.

### Indoor and outdoor sirens

While designed for security, the security needs to look good too. Inside and out. It's a way of showing everyone that you are protected. It also provides a local alert. Great looking designs in first-rate quality housings, the NX-10 series sirens are fully battery operated. Of necessity, they are resistant to high intensity impacts, so they integrate tamper- and burgle-proof protection for best-on-market anti-sabotage and anti-vandalism security.

Anyone attempting to neutralise your siren will activate an alarm. Auto-powered, the system reacts to intrusions even during power cuts while being robust enough to withstand the harshest climate. Emitting a modulated signal that is instantly distinguishable from all other alarms, at 100-115 decibels, there is no absolutely no doubt that potential intruders will be warned off your property. Our sirens secure your home, your office, arming different areas as you wish.

### Facts

- Fully integrated.
- Fully wireless
- NetworX Bus compatible
- Level Glas in mounting bracket
- 48 zone wireless panel in polycarbonate housing
- NX-10-LB-EUR: same as NX-10-EUR but large housing
- NX-10-GSM-EUR: 48 zone wireless panel in polycarbonate housing with 4 partitions
- 2 Inputs on-board
- 3 outputs on-board
- Maximum 4 keypads, full wireless or wired or any mix
- Maximum 4 wireless output modules (incl. sirens)
- 4-button key fob
- Panic button
- Passive infra-red detector
- Normal and pet immune versions
- Dual PIR/Microwave
- Slime line & Long life versions

## Trust your security to the experts

GE Security is a division of General Electric, one of the world's largest and most diversified industrial corporations. We commercialise selected flagship products on the personal and property security market.

We are one of the world's technological leaders, committed to meeting the specific needs of our customers. Headquartered in Brussels, our European organisation encompasses production facilities in Ireland and the Netherlands, as well as sales outlets in 24 countries across the continent.

And yet the effectiveness of our system is not due exclusively to the quality of its components. The quality of installation is also vital. Your installer takes the time to listen to your concerns, giving personalised advice on installation and services that are tailored exactly to your needs. He is fully trained in the ins and outs of our products, which enables him to recommend and install the system that gives you maximum peace of mind.
